

Proctor Evaluation Cheat Sheet

Quick at-the-table scoring aid, aligned to the official Solution Guide. Full reference answers are in the **ZTA Proctor Guide**. Do not show participants.

How to score. Each use case = **100 pts**: Mapping **40**, Products **30**, Diagram & solution **30**.

Tick what a team hits, award partial credit where intent matches, then total. 1–3 required, 4–5 bonus.

Use Case 1 — Managed Environment — Segmentation

Required

100 pts

① PAIN-POINT → PRODUCT MAPPING · 40 PTS

- ☐ VLAN/subnet complexity → **Implement SGTs** instead of VLAN/IP subnets.
- ☐ Profiling can't keep up → **ISE cloud AI profiling**.
- ☐ Failing PCI → **SGT segmentation + FW services where L7 is required**.
- ☐ PCs behind on AV/OS → **ISE Posture** + remediation.
- ☐ No budget for firewalls → **SGTs enforce segmentation in the existing wired/wireless network**.

② PRODUCTS — HOW & WHY / DIFFERENTIATORS · 30 PTS

- ☐ Names a specific product with a correct one-line “how it works”.
- ☐ Gives a genuine “why / differentiator”, not a generic benefit.

Expected set: ISE · ISE-SGT · ISE SGACL · ISE pxGrid · Catalyst SD-WAN · FMC/SCC/FTD · Cisco Secure Workload

③ DIAGRAM & OVERALL SOLUTION · 30 PTS

- ☐ An SGT per group and correct SGT-Matrix rules: IOT → DC + Internet only; Guest → Internet only; Mac-mini → on-prem DC only.
- ☐ Enforcement on the existing switches (no new firewalls); FW services inserted only where L7 (PCI) is needed.
- ☐ Employees profiled via 802.1X/WebAuth; IOT and Mac-minis via MAB/profiling.

COMMON GAPS / RED FLAGS — DOCK MARKS

- ☐ Relies on VLANs / IP ACLs instead of SGTs.
- ☐ Buys new firewalls just to segment.
- ☐ No ISE Posture story for the AV/OS pain.
- ☐ SGT Matrix leaves Guest or IOT over-permitted.

Score Mapping / 40 Products / 30 Diagram / 30

Total / 100

Use Case 2 — Remote Workers — Zero Trust Access

Required

100 pts

① PAIN-POINT → PRODUCT MAPPING · 40 PTS

- ☐ Over-permissive VPN → **Zero Trust Access (Secure Client → Secure Access)**.
- ☐ Manual daily VPN → **ZTA module auto per-app tunnels**.
- ☐ Too many sign-ons → **Duo Passport SSO**.
- ☐ Passwords / stolen creds → **Duo advanced passwordless**.
- ☐ Okta too costly → **Duo Directory**.
- ☐ SASE branches → **SD-WAN into Secure Access with Direct Internet Access**.

② PRODUCTS — HOW & WHY / DIFFERENTIATORS · 30 PTS

- ☐ Names a specific product with a correct one-line “how it works”.
- ☐ Gives a genuine “why / differentiator”, not a generic benefit.

Expected set: Secure Access · Secure Client (ZTA + VPN Full Tunnel) · Secure Access Private Resources proxy · Duo (Passport/Directory/Passwordless) · Secure Access VPNaaS · Secure Access Unified Policy · SD-WAN (SASE) · SWG

③ DIAGRAM & OVERALL SOLUTION · 30 PTS

- ☐ ZTA per-app for modern apps; full VPN kept only for selected legacy apps.
- ☐ SWG blocks gambling/gaming categories; contractors reach apps via browser-only (clientless RDP).
- ☐ Duo Passport SSO + advanced passwordless; Duo Directory replaces Okta.
- ☐ SASE = Secure Access + Catalyst SD-WAN (IPsec / Direct Internet Access).

COMMON GAPS / RED FLAGS — DOCK MARKS

- ☐ Keeps broad client VPN as the primary access (not Zero Trust).
- ☐ No passwordless / Duo Passport story.
- ☐ Gives contractors client VPN instead of browser-only clientless access.
- ☐ No SWG category control for gambling/gaming.

Score Mapping / 40 Products / 30 Diagram / 30

Total / 100

Use Case 3 — AI Access and Agent Controls

Required

100 pts

① PAIN-POINT → PRODUCT MAPPING · 40 PTS

- ☐ Shadow AI → **Secure Access AI Access** (discover & control AI usage).
- ☐ Unknown/over-privileged MCP servers → **Secure Access AI Gateway** (register & manage MCP servers).
- ☐ Personal ChatGPT credentials → **Secure Access tenant controls**.
- ☐ Risky model downloads → **Secure Access semantic inspection**.
- ☐ Fine-grained control + Claude Desktop agents → **Duo IdP agent registration (DCR) / fine-grained authorization**.

② PRODUCTS — HOW & WHY / DIFFERENTIATORS · 30 PTS

- ☐ Names a specific product with a correct one-line “how it works”.
- ☐ Gives a genuine “why / differentiator”, not a generic benefit.

Expected set: AI Access within Secure Access · AI Gateway within Secure Access · Secure Access tenant control · Secure Access semantic inspection · Duo IdP (DCR) · (Cisco AI Defense DLP)

③ DIAGRAM & OVERALL SOLUTION · 30 PTS

- ☐ AI egress (managed devices + Claude Desktop agents) routed through Secure Access AI Access with guardrails/DLP.
- ☐ AI Gateway registers and allow-lists MCP servers; local agents (Claude Code) governed via Duo authorization.
- ☐ Tenant control enforces the corporate ChatGPT tenant and blocks personal logins.
- ☐ Semantic inspection blocks risky AI models.

COMMON GAPS / RED FLAGS — DOCK MARKS

- ☐ Only blocks AI outright (no fine-grained, identity-based control).
- ☐ No MCP-server registration/governance (AI Gateway).
- ☐ Ignores local desktop agents / Duo agent registration.
- ☐ No tenant control or model inspection.

Score Mapping / 40 Products / 30 Diagram / 30

Use Case 4 — Merger & Acquisition — Extend Segmentation

Bonus

100 pts

① PAIN-POINT → PRODUCT MAPPING · 40 PTS

- ☐ Extend segmentation → **SGT capability in remote FTD; inline tagging HQ → remote.**
- ☐ Not ready to onboard 100 staff → **Duo Directory + SCIM import from Okta.**
- ☐ Minimize disruptive auth → **Duo SSO routing rules (Okta coexists).**
- ☐ Breached / passwords → **Duo Passwordless.**
- ☐ Selected users → Site 9951 → **source & dest SGTs in remote FTD policy; SCC** pushes SGT policy into SD-WAN.

② PRODUCTS — HOW & WHY / DIFFERENTIATORS · 30 PTS

- ☐ Names a specific product with a correct one-line “how it works”.
- ☐ Gives a genuine “why / differentiator”, not a generic benefit.

Expected set: FMC/FTD (S2S VPN + inline SGT) · Duo Directory (SCIM) · Duo SSO routing · Duo Passwordless · SCC

③ DIAGRAM & OVERALL SOLUTION · 30 PTS

- ☐ Site-to-site VPN from the acquired-site FTD to HQ FTD; SGTs extended via inline tagging.
- ☐ Only the selected group reaches the Site 9951 restricted resource (source/dest SGT in FTD).
- ☐ Duo Directory hosts the 100 staff via SCIM from Okta — no bulk corporate-directory onboarding.
- ☐ Duo SSO routing keeps Okta working during transition; acquired users get passwordless.

COMMON GAPS / RED FLAGS — DOCK MARKS

- ☐ Re-subnets / rebuilds VLANs instead of extending SGTs.
- ☐ Bulk-imports 100 users into the corporate directory (ignores the quick Duo-Directory/SCIM ask).
- ☐ Leaves acquired users on passwords (no Duo passwordless).
- ☐ Opens the Site 9951 resource to all branch users.

Score Mapping / 40 Products / 30 Diagram / 30

Use Case 5 — Zero Trust across Multicloud Data Center

Bonus

100 pts

① PAIN-POINT → PRODUCT MAPPING · 40 PTS

- ☐ No app visibility → **Secure Workload App Dependency Mapping** (on-prem + AWS + Azure).
- ☐ No segmentation plan → **Secure Workload auto-baseline policy** (discover → validate → enforce).
- ☐ Kubernetes latency/visibility → **Isovalent (Cilium/eBPF) + Tetragon runtime**.
- ☐ Can't patch IOT → **segment + runtime protection as compensating control**.
- ☐ Disparate mgmt interfaces → **Cisco Cloud Control (SCC)** unifies UIs.

② PRODUCTS — HOW & WHY / DIFFERENTIATORS · 30 PTS

- ☐ Names a specific product with a correct one-line “how it works”.
- ☐ Gives a genuine “why / differentiator”, not a generic benefit.

Expected set: Cisco Secure Workload (CSW) · NGFW/FTD · Isovalent (Cilium/eBPF/Tetragon) · ISE (pxGrid common policy) · Cisco Cloud Control (SCC)

③ DIAGRAM & OVERALL SOLUTION · 30 PTS

- ☐ CSW App Dependency Mapping discovers apps/flows across on-prem, AWS, Azure and Kubernetes.
- ☐ Auto-baseline microsegmentation; ISE shares SGT/identity context via pxGrid to CSW and FTD.
- ☐ Isovalent/Cilium/Tetragon for K8s runtime protection; virtual appliances (FTDv) to fit budget.
- ☐ Single management plane via Cisco Cloud Control (SCC).

COMMON GAPS / RED FLAGS — DOCK MARKS

- ☐ Buys hardware firewalls everywhere (ignores budget / native-first).
- ☐ No App Dependency Mapping / discovery before segmenting.
- ☐ Ignores Kubernetes runtime (Isovalent/Cilium) and IoT compensating controls.
- ☐ Leaves multiple disparate management consoles.
