

Running the ZTA Design Clinic

Your 60-minute playbook: set the teams up, then keep them moving.

THE 60 MINUTES

0:00

Set up Assign the four roles; skim the customer architecture and the five use cases.

0:05

Use Case 1 · required Segmentation. Teams start their one diagram and capture answers.

0:17

Use Case 2 · required Remote worker Zero Trust Access. Extend the same diagram.

0:29

Use Case 3 · required AI access & agent controls. Extend the diagram again.

0:41

Present & score Teams walk you through the design; you score and give feedback.

0:52

Bonus if ahead Use Case 4 and/or 5, or refine the diagram.

SET UP FIRST

- **Teams of ~4** — Small groups keep everyone hands-on.
- **Assign 4 roles** — NetOps · Information Security · Compliance · Scribe (records answers).
- **5 use cases** — 1-3 required, 4-5 bonus. Do the required ones first.
- **One diagram** — Grow a single topology across the use cases, don't restart.

Engage and coach the teams

Guide the thinking. Ask, steer, and reward the reasoning, don't hand over answers.

1

Let them design first

Pose probing questions to steer the discussion. Give the direction, not the solution.

2

Sanity-check after UC1

Give each team a 60-second check so one wrong pattern doesn't repeat across every use case.

3

Keep them moving

About 12 minutes per required use case. Short bullets, not paragraphs. Name the product, say what and why.

4

Reward the “why Cisco”

Differentiators are the core SE skill. Use the “what to reward” notes in the Solution Guide.

Coach, don't solve. Your job is to guide the customer conversation the team is practicing, not to design it for them.

Score, level, and close

One cumulative level per group. A perfect three caps at Professional, Expert needs all five.

● Associate

All 3 required use cases completed

Cumulative under 70% (below 210 / 300)

● Professional

All 3 required use cases completed

70% or higher (210 / 300 or more). A perfect three is Professional.

● Expert

All 5 use cases attempted

80% or higher (400 / 500 or more).

Per use case: Mapping 40 · Products 30 · Diagram 30. Overall feedback and the group level go on the Workbook's final page.
