

How your team works through the clinic

Follow these steps, and loop through every use case before you submit.

- 1 Understand the challenge** Read the Design Clinic Workbook to learn each use case's customer pain points and desired outcomes.
- 2 Agree your Cisco solution** As a group, discuss and document in the Workbook the Cisco solution that addresses those needs.
- 3 Draw it on the flip chart** Use the flip chart as a whiteboard: sketch the high-level logical diagram of your recommended solution.
- 4 Repeat for every use case** Work through all your use cases, recording each solution on the same growing diagram. **Loop 1-4**
- 5 Review with your SME** Walk your SME through the design so far and take their guidance. **SME checkpoint**
- 6 Digitize with Cisco Circuit** Convert the whiteboard diagram with Circuit; when you're happy with it, attach the output into the Workbook. **Cisco Circuit**
- 7 Submit for evaluation** Do a final review with your SME, then submit your Workbook for evaluation. **SME checkpoint**
