

Proctor Evaluation Cheat Sheet

Quick at-the-table scoring aid — grade each team fast against these anchors. Full reference answers are in the **ZTA Proctor Guide**. Do not show participants.

How to score. Each use case = **100 pts**: Mapping **40**, Products **30**, Diagram & solution **30**.

Tick what a team hits, award partial credit where intent matches, then total. 1–3 required, 4–5 bonus.

Use Case 1 — Managed Environment — Segmentation

Required

100 pts

① PAIN-POINT → PRODUCT MAPPING · 40 PTS

- ☐ VLAN/subnet segmentation too complex → propose **SGTs (TrustSec)** instead of VLAN/IP.
- ☐ Profiling can't keep up → **Cisco ISE (cloud AI) profiling**.
- ☐ Failing PCI → **SGT segmentation + insert FW (FTD) where L7 is required**.
- ☐ PCs behind on AV / OS → **ISE Posture** + remediation before full access.
- ☐ No budget for firewalls → **SGT / SGACL on existing switches** (no new FW).

② PRODUCTS — HOW & WHY / DIFFERENTIATORS · 30 PTS

- ☐ Names a specific product with a correct one-line “how it works”.
- ☐ Gives a genuine “why / differentiator”, not a generic benefit.

Expected set: ISE · ISE-SGT · ISE SGACL policy · ISE pxGrid · Catalyst SD-WAN · FMC / SCC / FTD · Cisco Secure Workload

③ DIAGRAM & OVERALL SOLUTION · 30 PTS

- ☐ Labels all four groups: **Employees, IOT, deskagents, Guest**.
- ☐ Marks the **enforcement point(s)** — SGACL on switches/routers; FW (FTD) where L7.
- ☐ Honors access rules: IoT → DC + Internet only; Guest → Internet only; deskagents → on-prem DC only.
- ☐ Reuses the existing network — no wave of new firewalls.

COMMON GAPS / RED FLAGS — DOCK MARKS

- ☐ Relies on VLANs / IP ACLs for segmentation.
- ☐ Buys new firewalls just to segment (ignores budget pain).
- ☐ No posture story for the AV / OS pain.
- ☐ Guest not restricted to Internet-only, or IoT not restricted from other groups.

Score Mapping / 40 Products / 30 Diagram / 30

Total / 100

Use Case 2 — Remote Workers — Zero Trust Access

Required

100 pts

① PAIN-POINT → PRODUCT MAPPING · 40 PTS

- ☐ Over-permissive VPN → **Secure Access ZTNA** (per-app least privilege).
- ☐ Manual daily VPN → **Secure Client always-on / seamless ZTNA**.
- ☐ Too many sign-ons → **Duo SSO**.
- ☐ Passwords / stolen creds → **Duo passwordless (FIDO2/passkeys)**.
- ☐ Okta too costly → **Duo as SSO/IdP**.
- ☐ Block gambling/gaming → **Secure Access SWG + DNS security**.
- ☐ Contractors, unmanaged → **clientless ZTNA (RDP/VDI)**. Branch cost → **SD-WAN + Secure Access = SASE**.

② PRODUCTS — HOW & WHY / DIFFERENTIATORS · 30 PTS

- ☐ Names a specific product with a correct one-line “how it works”.
- ☐ Gives a genuine “why / differentiator”, not a generic benefit.

Expected set: Cisco Secure Access (SSE) · Cisco Duo · Cisco Secure Client · Catalyst SD-WAN · Umbrella / DNS security

③ DIAGRAM & OVERALL SOLUTION · 30 PTS

- ☐ Shows ZTNA (client + clientless) path to private apps, replacing broad VPN.
- ☐ Marks the SSE point of enforcement for internet control (SWG/DNS) and per-app policy.
- ☐ Contractors reach apps via clientless ZTNA only; corporate via least-privilege ZTNA.
- ☐ SASE branch: SD-WAN + Secure Access; identity via Duo (passwordless / SSO).

COMMON GAPS / RED FLAGS — DOCK MARKS

- ☐ Keeps broad client VPN as the primary access (not Zero Trust).
- ☐ No passwordless / phishing-resistant MFA story.
- ☐ Contractors given client VPN instead of clientless ZTNA.
- ☐ No SWG/DNS control for gambling/gaming.

Score Mapping / 40 Products / 30 Diagram / 30

Use Case 3 — AI Access and Agent Controls

Required

100 pts

① PAIN-POINT → PRODUCT MAPPING · 40 PTS

- ☐ Shadow AI → **Secure Access CASB / discovery** (report usage).
- ☐ Fine-grained per-user control → **identity policy (Duo/ISE) + ZTNA**.
- ☐ Only corporate ChatGPT tenant → **SWG tenant restrictions**; block personal login.
- ☐ No sensitive data to GenAI → **AI Defense + DLP**.
- ☐ Claude Desktop / MCP agents → **AI Defense guardrails + egress control**.
- ☐ Unknown MCP servers in DCs → **Secure Workload / Hypershield** discover + allow-list.
- ☐ Risky model downloads → **SWG file inspection + AI Defense model validation**.

② PRODUCTS — HOW & WHY / DIFFERENTIATORS · 30 PTS

- ☐ Names a specific product with a correct one-line “how it works”.
- ☐ Gives a genuine “why / differentiator”, not a generic benefit.

Expected set: Cisco AI Defense · Cisco Secure Access (CASB / SWG / DLP) · Cisco Duo · Secure Workload / Hypershield

③ DIAGRAM & OVERALL SOLUTION · 30 PTS

- ☐ Shows AI egress (managed devices + Claude Desktop agents) routed through Secure Access with AI Defense inspection.
- ☐ Enforces corporate-tenant-only ChatGPT and blocks personal credentials.
- ☐ DLP on prompts/uploads to prevent sensitive-data exposure.
- ☐ MCP-server flows in private/public DCs discovered and allow-listed (Secure Workload / Hypershield).

COMMON GAPS / RED FLAGS — DOCK MARKS

- ☐ Only blocks AI outright (no fine-grained, identity-based control).
- ☐ No DLP for data shared with GenAI.
- ☐ Ignores local agents (Claude Desktop) and MCP-server flows.
- ☐ No discovery/reporting of shadow AI.

Score Mapping / 40 Products / 30 Diagram / 30

Use Case 4 — Merger & Acquisition — Extend Segmentation

Bonus

100 pts

① PAIN-POINT → PRODUCT MAPPING · 40 PTS

- ☐ Extend segmentation → **TrustSec SGT propagation (SXP / inline) via SD-WAN**, policy from ISE.
- ☐ Selected users → Site 9951 resource → **SGT-based SGACL** enforced at FTD/switch.
- ☐ Not ready to onboard 100 staff → **federate acquired Okta to ISE/Duo (SAML)**.
- ☐ Minimize disruptive auth → **SSO / identity federation (Duo)**.
- ☐ Breached, still passwords → **Duo MFA + passwordless** for acquired users.

② PRODUCTS — HOW & WHY / DIFFERENTIATORS · 30 PTS

- ☐ Names a specific product with a correct one-line “how it works”.
- ☐ Gives a genuine “why / differentiator”, not a generic benefit.

Expected set: Cisco ISE · Cisco TrustSec (SGT) · Secure Firewall (FTD) · Cisco Duo · Catalyst SD-WAN

③ DIAGRAM & OVERALL SOLUTION · 30 PTS

- ☐ Shows SGTs extended from HQ to the acquired site over SD-WAN, enforced at the on-site FTD.
- ☐ Only the selected group reaches the Site 9951 restricted resource (SGACL).
- ☐ Acquired Okta federated to ISE/Duo — no bulk directory re-provisioning.
- ☐ Acquired users get MFA / passwordless immediately.

COMMON GAPS / RED FLAGS — DOCK MARKS

- ☐ Re-subnets or rebuilds VLANs to extend segmentation instead of SGT.
- ☐ Bulk-imports 100 users into the corporate directory (ignores the quick-federation ask).
- ☐ Leaves acquired users on passwords (no MFA/passwordless).
- ☐ Opens the Site 9951 resource to all branch users.

Total / 100

Use Case 5 — Zero Trust across Multicloud Data Center

Bonus

100 pts

① PAIN-POINT → PRODUCT MAPPING · 40 PTS

- ☐ No app visibility → **Secure Workload App Dependency Mapping** (on-prem + AWS + Azure + K8s).
- ☐ No segmentation plan → **Secure Workload auto-policy + validation.**
- ☐ K8s latency/visibility → **Hypershield (eBPF).**
- ☐ Runtime protection / blast radius → **Hypershield autonomous segmentation.**
- ☐ Can't patch IoT → **Hypershield virtual patching.**
- ☐ Disparate mgmt interfaces → **Security Cloud Control** (unified).
- ☐ Budget / native → **Multicloud Defense + virtual appliances.**

② PRODUCTS — HOW & WHY / DIFFERENTIATORS · 30 PTS

- ☐ Names a specific product with a correct one-line “how it works”.
- ☐ Gives a genuine “why / differentiator”, not a generic benefit.

Expected set: Cisco Secure Workload · Cisco Hypershield · Cisco Multicloud Defense · Security Cloud Control · Secure Firewall (FTDv)

③ DIAGRAM & OVERALL SOLUTION · 30 PTS

- ☐ Shows app discovery + microsegmentation spanning on-prem, AWS, Azure and Kubernetes.
- ☐ Runtime protection / autonomous segmentation to minimize blast radius (Hypershield).
- ☐ Virtual patching for unpatched IoT.
- ☐ Single management plane (SCC); native enforcement + virtual appliances to fit budget.

COMMON GAPS / RED FLAGS — DOCK MARKS

- ☐ Buys hardware firewalls everywhere (ignores budget / native-first).
- ☐ No app-discovery / dependency mapping before segmenting.
- ☐ Ignores Kubernetes runtime and IoT patching.
- ☐ Leaves multiple disparate management consoles.
